

Product: Autoflex Couplings

Distributor: Bearing & Transmission – Calgary

Function:

The customer uses a Waukesha engine (not shown) to drive a Turner two speed gearbox which then in turn drives a Borneman screw pump.

A fluid coupling, which is shown to the far right, connects the engine and the gearbox.

An Autoflex AG coupling was chosen for the connection between the gearbox and the pump.

Benefit:

The customer was impressed with the local stock which was being held by B&T in Alberta. Furthermore, Autogard's reputation for emergency breakdown service which is unavailable through the competitors helped to secure the order.

Autoflex Coupling:

Autogard Coupling: AG 450-6 for a 12" DBSE
